First Australian IPV6 Summit Canberra 31 Oct - 1 Nov 2005

Large-scale deployment of Internet Protocol Version 6 is being planned now in Asia, North America and Europe. This new and more powerful protocol for Internet technology offers great opportunities for innovation due to its inbuilt mobility, manageability and security. Australian organisations must position themselves now for IPv6, as it will widely affect users, government, defence and business. The Summit offers two days of presentations from international experts, a technology exhibition, followed by an optional, one-day hands-on IPv6 Deployment Workshop.

Further details on the IPv6 Summit are available at the website above
