

New Zealand IPv6 Task Force State of the Nation

October 2011

The Purpose of the Task Force

"The New Zealand IPv6 Task Force is tasked with promoting the adoption of IPv6, assisting with training and education options and implementation planning. The Task Force is aligned with the Global IPv6 Forum, and its work is driven by the impending exhaustion of IPv4 addressing and the associated risk and additional cost that this is expected to impose on New Zealand organisations."

<http://www.ipv6.org.nz/about/>

The IPv6 Task Force is an Industry Group Working to Promote the Adoption of IPv6 in NZ

Charitable Trust:

Murray Milner, Dean Pemberton,
Vikram Kumar

Convenors:

Murray Milner
Dean Pemberton (technical)

Secretariat:

InternetNZ

Funders

InternetNZ
FX Networks
Microsoft
InspireNet
Prophecy Networks

Members

Alcatel Lucent	Development
Allied Telesis	NZi3
Auldhouse	NZICT
Braintrust	NZDF (New Zealand
Canterbury Development	Defence Force)
Corporation	NZRS (New Zealand
Catalyst	Registry Services)
Cisco Systems	Orcon
Department of Internal	Prophecy Networks
Affairs	REANNZ
FX Networks	Tech Mahindra
Gen-i	Telecom New Zealand
Huawei	Telecommunications
IBM	Carriers Forum
InternetNZ	TVNZ
InspireNet	TelstraClear
Juniper Networks	TUANZ
Kordia	Voco
Microsoft	Vodafone New Zealand
Ministry of Economic	WorldxChange

Overview of APNIC Leading Countries

- AUSTRALIA
- BANGLADESH
- CHINA
- HONG KONG
- INDIA
- INDONESIA
- JAPAN
- SOUTH KOREA
- MALAYSIA
- PAKISTAN
- PHILIPPINES
- SINGAPORE
- TAIWAN
- THAILAND
- VIETNAM

Of the 58 member nations, the most prominent 18 based on size of economy and technology infrastructure development are shown.

Countries where the Government has stimulated generation of IPv6 adoption timelines for Government and industry or mandated them.

- NEW ZEALAND
- CAMBODIA
- GUAM

Countries where there are NO Government mandated timelines

Requires a Different Approach!

The New Zealand Task Force Approach

Our principles are:

- We remain aware of what is happening globally and locally
- We share our information and help others find the information they need
- We are supportive of progress across all stakeholders, large and small
- We refrain from vilifying real or perceived lack of progress

What we do:

We conduct surveys to gain insight into trends

Encourage early adopters

Provide support through our technical special interest group

Industry sector liaison

Government sector liaison

Facilitate training capability

Facilitate evolution of IPv6 products and services

Leverage our web & social media presence

Work with pathfinders to discover learnings that can be shared

Stay connected to progress and news from around the world

Media and publicity

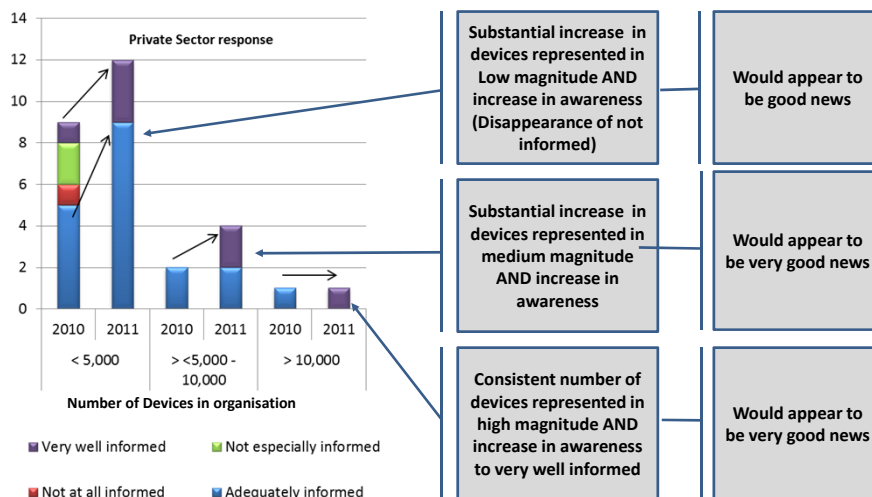

New Zealand: Current Situation

– based on surveys, engagement with Government,
enterprise, industry groups and participation in local and
international events

Top 100: Private Sector Responses

Substantial increase in the devices represented and improved awareness levels

Top 100: Public Sector Responses

Decrease in devices represented in low magnitude range – Stable awareness
Disappearance of – “not especially informed”

Possible further investigation required

Increase in devices represented in medium magnitude range AND increase in awareness

Would appear to be good news

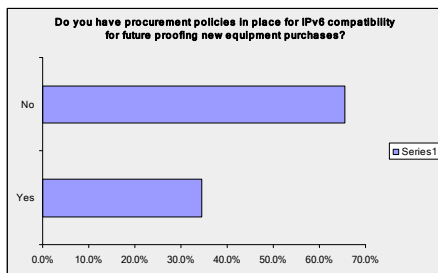

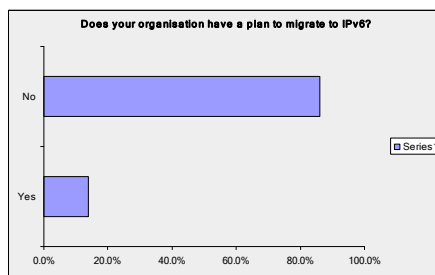

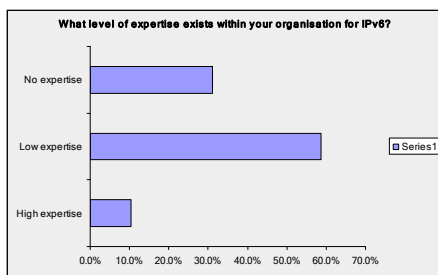

Nearly double the number of devices represented in high magnitude range AND increase in awareness

Would appear to be good news (although some respondents not especially well informed)

Similar number of devices represented, but in larger organisations - with increased awareness levels

Local Government Survey: No. 1, August 2011

- Local Government engagement is currently low
 - There are some notable exceptions
- IPv6 expertise is low
 - Training being established
- Adoption planning is low
 - Procurement policies better

Demand Surveys – Summary

- **IPv6 awareness is sufficient**
 - Diminishing return on investment
- **Government sector adoption response seems slow**
 - Not a great engagement to date, but we anticipate that there is work going on behind the scenes
 - Central Government might be ahead of Local Government
- **ISP/Carrier sector mobilising**
 - But are key players moving fast enough to drive adoption?
- **Consumer/WAN CPE seems to be a constraint**
 - How are some ISP's and carriers dealing with this today?
- **Increasing industry support for IPv6 Task Force initiatives**
 - Increasing membership
- **Commercial training capability maturing**
 - Ad-hoc low cost courses available

Supply Side ISP / Carrier – Survey Results

Has your organisation been allocated an IPv6 address range?

Has your organisation evaluated IPv6 support and features in CPE?

Does your organisation have an IPv6 test environment?

Supply Side: ISP / Carrier – Survey Results

Does your organisation provide resources such as FAQs, knowledge base articles and similar for residential customers needing advice on IPv6?

Does your organisation have the capability to provide business customers with IPv6 planning information?

Does your organisation currently provide IPv6-enabled products and services?

Supply Side: ISP/Carrier Survey

- Work is going on behind the scenes, but there is a reluctance to go public
- 41% of organisations currently provide IPv6-enabled products and services
 - 25% will provide IPv6-enabled products and services within the next 12 months; 66% by mid 2012
- 73% have a test environment now. Remainder likely to follow within 6 months
- 73% have or are evaluating CPE
 - Consumer CPE suppliers appear to be behind Enterprise suppliers, but some respondents claim WAN CPE is not readily available as yet
- 91% of respondents do not provide FAQ's or support for residential customers

Current State: Awareness

Category	Assessment	Evidence/comments
Central Government	Adequate	Statistics from Task Force CIO survey.
Local Government	Adequate	Statistics from Task Force CIO survey. Engagement with ALGIM & pathfinder.
Corporate	Adequate	Statistics from Task Force CIO survey
SME's	Med-Low	ISP/Carrier survey indicate indicates low level of awareness
Consumers	Low – but low impact	Main stream TV featured IPv6 related news on 4 occasions (World IPv6 Day, APNIC address expiry) Consumers reliant on ISP/Service providers for information.
Vendors - Networking	Adequate	
Vendors - CPE	Adequate	
System Integrators	Adequate	
ISP's / Carriers	Adequate	On-going survey & benchmarking proposed

Adoption (Demand side) – Strategy, Planning & Procurement

Category	Assessment	Evidence/comments
Central Government	Limited visibility	Anecdotally, progress being made however a diminished number of respondents in 2011 CIO survey . Task Force proactively engaging Q4 2011
Local Government	Poor progress	Tauranga City Council leading ALGIM* involvement - scaling up.
Corporate	Adequate	Significant evidence in Top 100 CIO survey that organisations are planning for and ramping up web site transitions – Encouraging SIs
SME's	Med-Low	Low visibility of this group.
Consumers	None	Early adopters are experimenting

*ALGIM - Association of Local Government Information Management

Adoption Capability (Supply side) – Strategy, Planning & Procurement

Category	Assessment	Evidence/comments
ISP's / Carriers	Adequate	OSS/BSS may be lagging
Vendors - Networking	Adequate	Some products appear to be lagging (E.g. firewalls and network performance tools)
Vendors - CPE	Lagging	ISP/Carrier survey indicate this group may be lagging – Task Force is engaging vendors and consumer advocacy groups to progress issue.
System Integrators	Adequate	Internal training and skills development may be lagging. Proposal being considered as to how the Task Force can gain more insight into progress.

New Zealand: The Good News

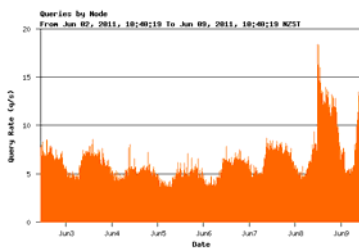

– some good outcomes appearing in the New Zealand market

Adoption Examples: Web Sites

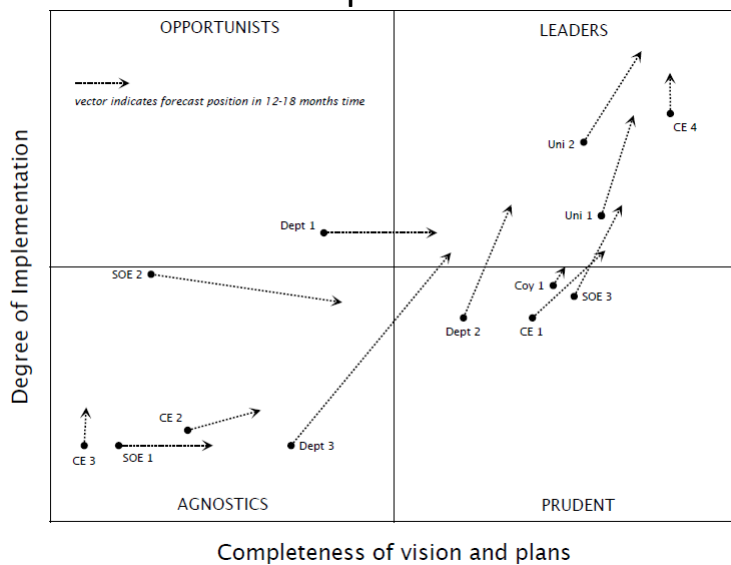

Tauranga City Council: Adoption Leader

The 6to4 site-specific relay handles delivery of 2002::/16 traffic back to IPv6 users on the internet.
 The Teredo relay (also site specific) handles delivery of 2001:0::/32 traffic back to IPv6 users on the internet.
 These two services have been implemented to ensure good IPv6 communication where transition technologies (as opposed to native IPv6) are in use at the client end.

Government Sector Current Status & Projected Adoption Path

ISP/Carriers with IPv6 Offerings

IPv6 Service Offerings in NZ

THE UNIVERSITY OF AUCKLAND
NEW ZEALAND

Massey University

Consumer CPE Update

IPv6 compliant IP Router product has made it's way on to retailer shelves. Prices are the same or similar to IPv4 product.

Wireless router – Wellington retail outlet Sept. 2011

Manufacturers advise that:

- IPv6 compliant DSL Modem routers are currently undergoing IPv6 logo certification process and have already been shipped to ISP's for testing.

Some Key Insights for Adoption

1. Keep reminding your organisation about IPv6
 - Without a **dedicated champion** we know you will find this be very difficult.
2. Remember to include IPv6 in the 5 P's
 - Policies
 - Procedure's
 - Procurement
 - Planning
 - Projects
3. Think big but **START SMALL**
 - External facing web sites are the best place to start
 - Do not overwhelm your investment manager with the need for a **BIG \$** investment, you may never get started

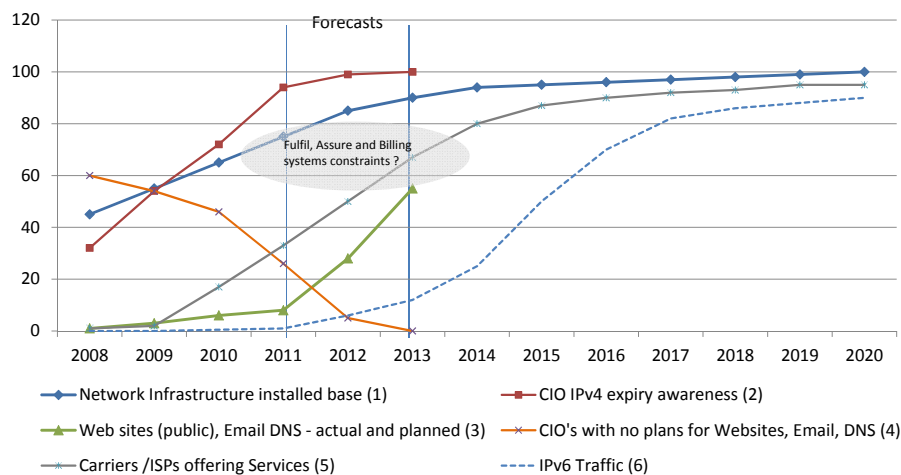

New Zealand: The Future

– scenarios and our action plan

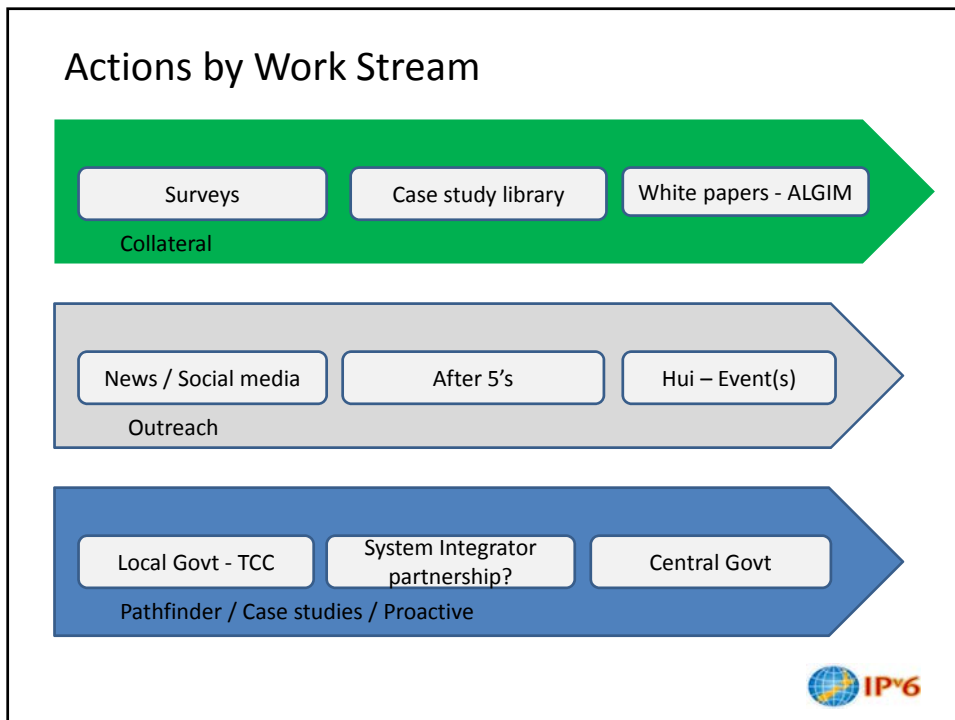

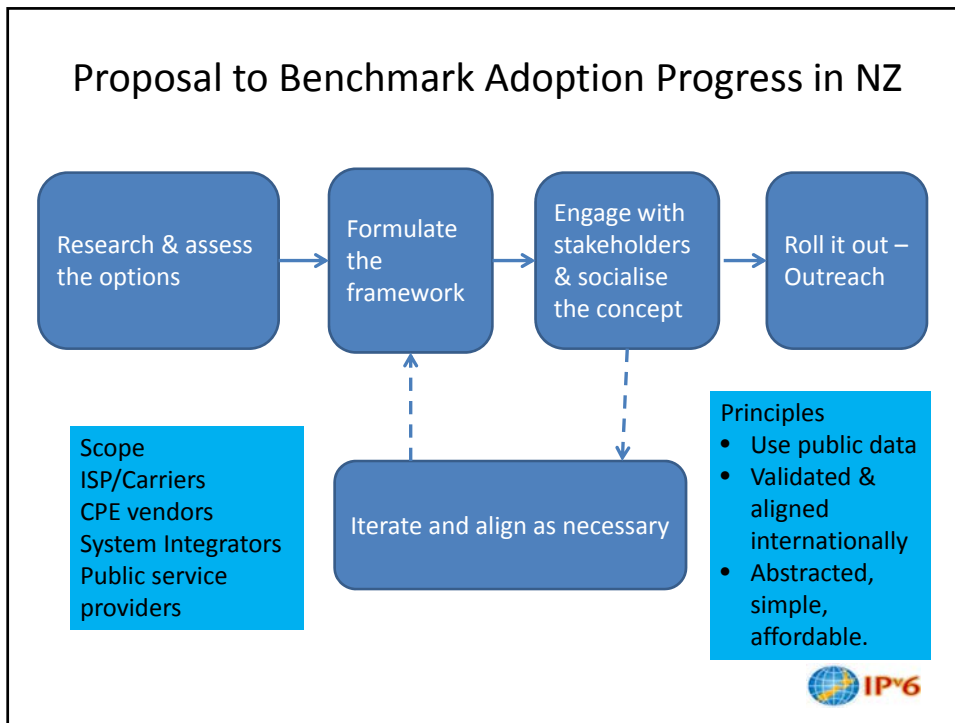

NZ Adoption Scenario – Forecasting the Future

- 1. Estimate (approx. 10% refresh per annum,)
- 2. Top 100 CIO survey
- 3. Top 100 CIO Survey
- 4. Top 100 CIO Survey
- 5. New Zealand statistics dept.(2011 & 12 to be confirmed)
- 6. International traffic growth forecast

A Few Issues Still To Consider

1. Can we rely on market forces alone?
2. To what extent should we be encouraging Government adoption?
 - E.g. Procurement guidelines, Citizen overseas access, etc
3. Can we get buy-in to a Government backed timeline?
4. Can we get buy-in to an industry backed timeline?
5. Can we assist with industry standards for CPE (to support consumer deployment)?
6. Impact of Government spectrum clearance & timing of LTE , 4G deployment on IPv6 adoption in NZ?
 - Timing and impact of "Internet of Things" growth (M2M, mobile device diversity, etc)
7. What is the impact on service availability if carrier OSS may not be capable inside a year?

Conclusions

- There are no Government-led mandates for adoption in the New Zealand market
- Surveys tell us:
 - Awareness across all sectors is strong
 - Procurement practices are improving
- Adoption is variable
 - Central Government will make good progress during 2012
 - Local Government needs some focus (ALGIM)
 - ISPs/Carriers likely to be ready during 2012
 - Enterprises highly variable needing support from system integrators
- IPv6 Task Force is moving towards structured benchmarking of progress towards adoption

Thanks for Your Attention
